1. Use your hand or foot to press the 'Ejector Button' which is located at the rear of the 'Swivel Frame.'

2. When the button is pressed the Squeegee will be ejected from the Mop Base (Main Body).

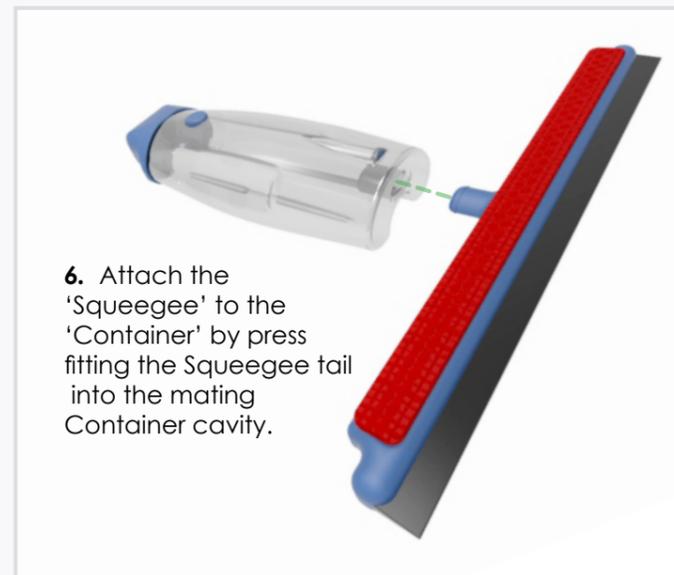

3. The 'Container Holster' is secured to the 'Handle Bar' when the 'Holster Adjusting Screw' is tight. Keep the 'Holster' fixed when detaching the 'Container.'

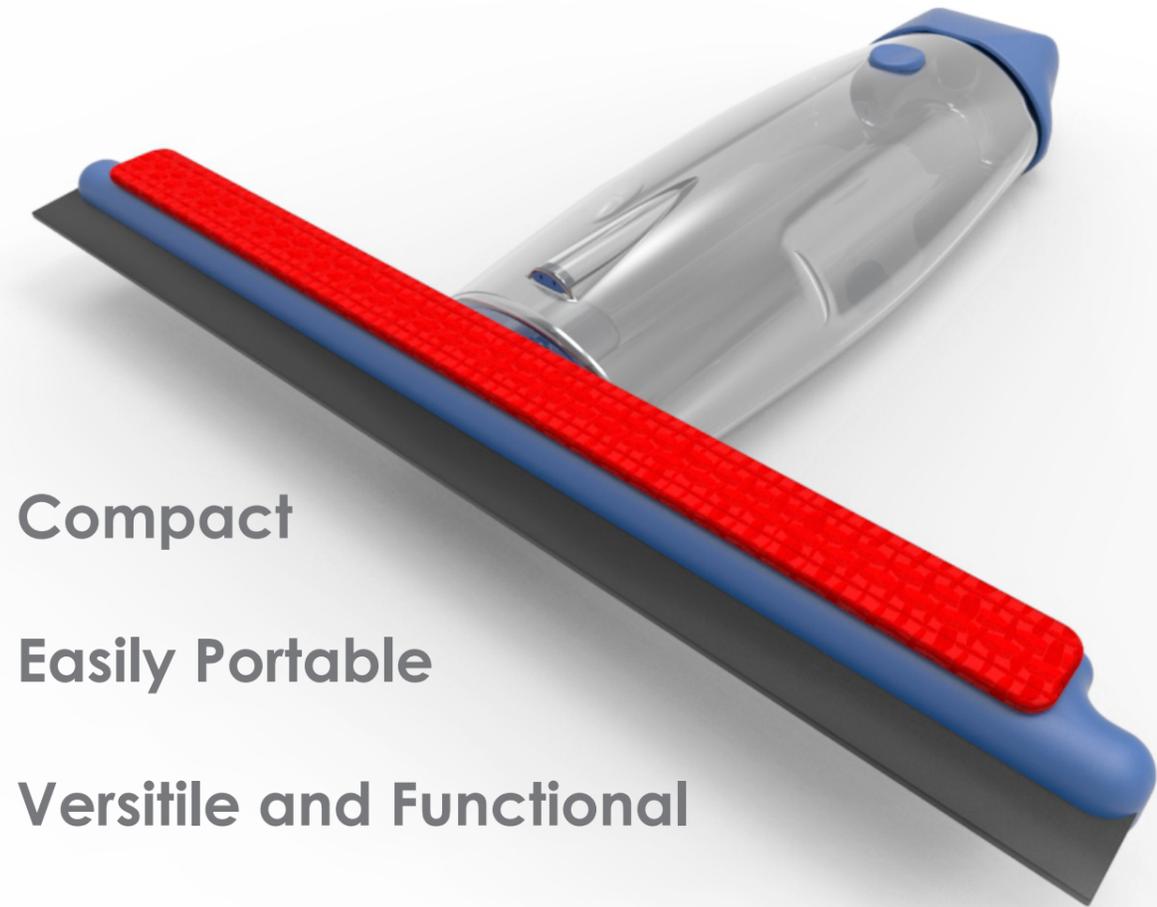

4. Pull out and slide the 'Container System' away from the 'Holster,' and then remove it from the 'Handle Bar.'

5. Remove the 'Cover' from the 'Container' to refill it with cleaning fluid, which will be dispensed from the nozzle when the button is pressed.

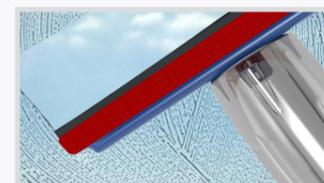

6. Attach the 'Squeegee' to the 'Container' by press fitting the Squeegee tail into the mating Container cavity.

Compact

Easily Portable

Versatile and Functional

Mop up large/flat surfaces in contemporary homes such as tiled floors, paved areas, floorboards and large windows.

Simply fill the container with cleaning fluid, then press the dispensing button to spray atomised cleaning solution onto intended areas.

Once a cleaning pad reaches a slovenly state, simply remove it from the 'Mop Base' and replace it with a clean pad. Once cleaning is finished, wash the soiled cleaning pads to reuse them in the future.

**The Mopper Upper is a versatile cleaning solution to improve the way individuals clean their homes, and to improve on the negative mentality associated with cleaning.**

**The multifunctional, user friendly design and versatility of the Mopper Upper enables users to clean various areas and items with an aesthetically pleasing and compact product that will be easy to store when not in use.**

The Squeegee Unit is perfectly suitable for cleaning smaller surfaces.

It is small, compact, handheld, and easily portable, making it ideal for cleaning various items and areas in a home.

Use it to wipe down windows, mirrors, display units, table tops and aquariums. You can even use it to clean vehicles, especially for windscreens.

When cleaning floors or large windows with the 'Mopper Upper' you can displace fluid by utilising the constrained 'Squeegee' located at the rear of the 'Mop Base.'

Simply tilt the 'Mop Base' to expose the secured 'Squeegee,' by making the durable squeegee edge come into contact with a surface to wipe away excess moisture and to remove any residue and finite debris.

Furthermore, by displacing the remaining cleaning fluid to the next dirty area, the time spent mopping-up and refilling the container is greatly reduced.

When cleaning floors the user can adjust the position of the 'Dispensing Container system' to suit their size.

The Container Systems form encourages users to hold the container for ergonomic benefits when mopping.

The position adjustable feature accounts for users to dispense fluid at a low height, and then raise the system for handling and ergonomic advantage.
